

E-commerce Thought note

This project has taught me a lot, faced many problems during making it but all got solve by online searching and in live session and doubt clearing session. I got to know a lot about CSS, JavaScript, JQuery and bootstrap in little detail. In JQuery used media query to make the page the responsive for all device. In cart item I have added two cart option and learned how to link another file to another like adding header and footer to all the page. Overall new experience and new things learnt.
